BEFORE USING BLACKBOARD:

PRACTICE THESE INSTRUCTIONS AND CALIBRATE EXACT-ERASE™ FOR BEST RESULTS.

CLEAR EVERYTHING WITH A SINGLE BUTTON TOUCH

To erase the entire writing surface, simply slide the Lock Switch to the left, then press the Clear Button. To protect your work from accidental erasing, slide the Lock Switch to the right which disables both the Clear Button and the Exact-Erase Button.

ERASE LIKE PENCIL BY HOLDING DOWN THE EXACT-ERASE™ BUTTON

Important: An effect that mimics the look of eraser smudges and slight dimming with Exact-Erase are normal but can be diminished by calibrating the button using the Calibrating For First Use instructions below.

NORMAL USE:

Step 1. Start with a sample set of scribbles across Blackboard to practice erasing with these instructions. Be sure to slide the Lock Switch to the left to enable erasing.

Step 2. To practice erasing, press and hold the Exact-Erase button and erase like pencil using very firm pressure on the Blackboard Pen Eraser.

An effect that mimics the look of eraser smudges and slight dimming are normal but can be diminished by continuing to the Calibrating For First Use instructions below.

CALIBRATING EXACT-ERASE: (RECOMMENDED FOR FIRST USE)

If you are satisfied with your practice erase results, there is no need to calibrate Exact-Erase. Otherwise, if you are not satisfied with the results, the Exact-Erase button can be calibrated to diminish eraser smudges and/or dimming by continuing to Steps 3 and 4:

Step 3. Press and hold the Exact-Erase Button, then press and release the Clear button to advance to the next calibration setting.

Step 4. Continue to hold the Exact-Erase Button and test the new setting by erasing a portion of the scribble, remembering to apply very firm pressure when erasing. If satisfied with the new setting, release the Exact-Erase Button to lock in the calibration.

Otherwise, continue to hold the Exact-Erase Button and continue to advance on to the next calibration setting by tapping the Clear Button until you find a calibration setting you like. Remember, do not let go of the Exact-Erase Button until you have locked in to a calibration setting you like.
